

Amy Xiong

Computer Science Student at University of British Columbia
amyxiong@gmail.com | 778-302-7598 | [Personal Website](#) | [LinkedIn](#) | [Github](#)

EDUCATION

University of British Columbia, Vancouver, BC

Expected May 2027

B.S. in Computer Science

GPA: 3.7/4.0 | Dean's Honour List

TECHNICAL SKILLS

Languages: Python, Java, C#, C, C++, SQL, JavaScript, TypeScript, R

Frameworks/Libraries: Angular, React, Next.js, .NET, Tailwind CSS, Radix UI, TensorFlow, NumPy

Tools/Platforms: Git, GitHub, Docker, PostgreSQL, MySQL, Supabase, REST APIs, Postman, Jira, Confluence

Relevant Coursework: Data Structures, Algorithms, Databases, Object-Oriented Design, Concurrency

EXPERIENCE

Software Engineer Co-op (Full Stack)

Aug 2025 – May 2026

Wartsila Voyage

- Built and maintained production features across both frontend and backend using Angular, TypeScript, C#, .NET, and SQL
- Designed and optimized database queries and filtering logic, improving performance of data retrieval
- Diagnosed and debugged production issues, ensuring system reliability and data consistency
- Implemented backend validation logic and services across API and database layers
- Collaborated in an Agile team, contributing to testing, CI/CD pipelines, and production releases

Software Developer Co-op

Jan 2024 - Apr 2024

BC Cancer Research Center

- Built Python and C# tools for microscopy data processing, applying machine learning and algorithmic techniques to automate workflows
- Improved preprocessing pipeline performance by 30%, optimizing data pipelines and computation efficiency
- Developed image classification models using TensorFlow (CNNs) and Random Forests, evaluating model performance and accuracy
- Supported machine learning pipelines with efficient data handling and preprocessing

PROJECTS

TimeOff Portal

April 2026 – May 2026

- Built leave-management system with JavaScript, SQL, authentication, role-based access control, and approval workflow logic.
- Implemented employee/manager workflows for submitting, reviewing, approving, and tracking PTO requests through full-stack CRUD operations.

CareerHighMatch.ai

May 2025 - Present

- Built backend pipelines using Python and PostgreSQL to process GitHub data, enabling structured data extraction for AI-driven analysis
- Designed data workflows supporting feature extraction and downstream model usage
- Developed full-stack features in React/Next.js, integrating APIs and dynamic data processing

Accelera

Jan 2025 - Apr 2025

- Built full-stack features for a startup ecosystem platform using Next.js, React, Supabase, PostgreSQL, Tailwind CSS, and SQL
- Developed backend APIs for startups, funding rounds, and events, and designed the PostgreSQL schema for dynamic UI views
- Implemented database-backed SQL queries including joins, aggregation, and nested queries to support dynamic filtering and analytics features

Wordle Game (Java)

2023

- Built object-oriented Java application using design patterns, data structures, and JUnit testing
- Implemented game logic, state management, and persistent JSON data handling

LEADERSHIP

Events Executive, UBC CSSS / HKSA / CSA

Sep 2024 - Present

- Organized events and initiatives for the student community and coordinated planning with other student leaders.

STEM Camp Coordinator

May 2023 - Sep 2023

- Designed lesson plans for 30+ students per week and led hands-on STEM activities while communicating with parents.
